

FolioFrame Buyer Sale-Room Pack

Static service website and static portal/demo surface

Export version: v1

This pack is for buyer diligence and external review. FolioFrame should not be represented as a live SaaS, live billing system, customer database or automated fulfilment platform in its current static/demo state.

Included Documents

- Export README
- Sale-Room Index
- Buyer Review Order
- Red-Flag Disclosure Summary
- Buyer One-Pager
- Acquisition Memo
- Demo Walkthrough Script
- Product Summary
- Asset And IP Manifest
- QA Evidence Summary
- Deployment-Readiness Summary
- Static/Demo Boundary Disclosure
- Buyer FAQ
- Valuation Rationale
- Outreach Email
- Buyer Sale-Room Pack Manifest

FolioFrame Buyer Sale-Room Export README

Purpose

This folder is the externally shareable buyer sale-room pack for FolioFrame.

It is designed for review by a prospective buyer, partner, broker or advisor who needs to understand what has been built, what can be shown today, and what remains outside the current static/demo build.

What The Pack Contains

The pack includes:

- Buyer one-pager
- Acquisition memo
- Demo walkthrough script
- Product summary
- Asset and IP manifest
- QA evidence summary
- Deployment-readiness summary
- Static/demo boundary disclosure
- Buyer FAQ
- Valuation rationale
- Outreach email
- Buyer review order
- Red-flag disclosure summary
- Export manifest

Current Product Status

FolioFrame is buyer-ready as a static service website and static portal/demo surface.

It should not be represented as a live SaaS, live billing system, production support desk, payment processor, customer database, live monitoring surface or automated fulfilment platform.

How To Use This Pack

Recommended review flow:

1. Read FOLIOFRAME_BUYER_ONE_PAGER .md.
2. Read FOLIOFRAME_RED_FLAG_DISCLOSURE_SUMMARY .md.
3. Review FOLIOFRAME_PRODUCT_SUMMARY .md.
4. Walk the demo using FOLIOFRAME_DEMO_WALKTHROUGH_SCRIPT .md.
5. Review FOLIOFRAME_QA_EVIDENCE_SUMMARY .md.
6. Review FOLIOFRAME_DEPLOYMENT_READINESS_SUMMARY .md.
7. Review FOLIOFRAME_ASSET_IP_MANIFEST .md.
8. Use FOLIOFRAME_BUYER_FAQ .md for diligence questions.
9. Use FOLIOFRAME_VALUATION_RATIONALE .md for acquisition discussion framing.

Static/Demo Boundary

The current repository includes live-product foundation work such as Prisma and Clerk planning/foundation, but the buyer-facing sale-room pack should treat FolioFrame as a static website and static portal/demo unless a separate production implementation phase is completed.

No production auth, live billing, real customer records, live checkout, live webhooks, email sending or fulfilment automation should be claimed as active.

Brand And Asset Boundary

The locked FolioFrame brand system and approved assets are already integrated in the repository.

Do not replace, redraw, regenerate, crop, trace, imitate or substitute approved logo, visual or motif assets.

Do not import rejected generated assets.

Recommended Buyer Action

Use this sale-room pack to evaluate FolioFrame as:

- A deployable service-brand website.
- A static portal/demo surface for buyer presentations.
- A structured implementation methodology.
- A foundation for future service-led SaaS buildout.

Before operating FolioFrame as live software, complete production auth, backend, secure credentials, integrations, privacy/legal review, support workflows and security review.

FolioFrame Sale-Room Index

Purpose

This sale-room pack helps a buyer review FolioFrame as a buyer-ready static service website and static portal/demo surface.

It should not be interpreted as proof of live SaaS operations, live billing, customer data, live monitoring or automated fulfilment.

Sale-Room Documents

1. Export README
2. Buyer One-Pager
3. Acquisition Memo
4. Demo Walkthrough Script
5. Product Summary
6. Asset And IP Manifest
7. QA Evidence Summary
8. Deployment-Readiness Summary
9. Static/Demo Boundary Disclosure
10. Buyer FAQ
11. Valuation Rationale
12. Outreach Email
13. Buyer Review Order
14. Red-Flag Disclosure Summary
15. Export Manifest

Supporting Repository Evidence

Relevant existing docs:

- docs/qa/FOLIOFRAME_FINAL_BUYER_READY_LAUNCH_QA_2026_07_02.md
- docs/qa/screenshots/final-buyer-ready-launch-qa-2026-07-02/
- docs/deployment/FOLIOFRAME_STATIC_BUYER_DEMO_DEPLOYMENT_NOTES.md
- docs/implementation/
- docs/live/

Primary Demo Routes

- /
- /signature-launch
- /pricing
- /app
- /app/implementation-docs

Buyer Diligence Gaps

Before acquisition close, buyer should complete:

- IP and asset rights review.
- Trademark and domain review.
- Legal/privacy review.
- Third-party dependency license review.
- Production security review before any live SaaS work.
- Revenue, traffic and customer diligence if any commercial claims are made.
- Live integration scope and cost estimate if the buyer wants SaaS functionality.

Recommended Buyer Review Order

1. Read the Buyer One-Pager.
2. Review the live/static boundary disclosure.
3. Walk the demo routes.
4. Review QA evidence and screenshots.
5. Review deployment notes.
6. Review implementation docs.
7. Review IP and diligence gaps.
8. Decide whether to deploy as a service brand or continue live product buildout.

Recommendation

FolioFrame is ready to present as a static service-brand asset and portal/demo foundation.

It is not ready to present as a live SaaS until production auth, backend, database, integrations, secure credentials, legal/privacy and operating workflows are completed.

FolioFrame Buyer Review Order

Purpose

This document gives buyers a practical order for reviewing FolioFrame without confusing the static/demo asset with a live SaaS product.

1. Start With The Snapshot

Read:

- FOLIOFRAME_BUYER_ONE_PAGER.md
- FOLIOFRAME_PRODUCT_SUMMARY.md

Review focus:

- What FolioFrame is.
- Who it serves.
- What buyer-access reliability problem it addresses.
- Which service offers and modules are already structured.

2. Read The Disclosure First

Read:

- FOLIOFRAME_RED_FLAG_DISCLOSURE_SUMMARY.md
- FOLIOFRAME_STATIC_DEMO_BOUNDARY_DISCLOSURE.md

Review focus:

- Static/demo status.
- No production auth.
- No live billing.
- No live customer records.
- No live fulfilment automation.
- Legal/privacy and IP diligence needs.

3. Walk The Demo Routes

Read:

- FOLIOFRAME_DEMO_WALKTHROUGH_SCRIPT.md

Then review the primary demo routes:

- /
- /signature-launch
- /pricing
- /app
- /app/implementation-docs

Review focus:

- Buyer-facing positioning.
- Pricing clarity.
- Premium offer hierarchy.
- Static portal usefulness.
- Demo honesty and boundary messaging.

4. Review QA And Deployment Evidence

Read:

- FOLIOFRAME_QA_EVIDENCE_SUMMARY.md
- FOLIOFRAME_DEPLOYMENT_READINESS_SUMMARY.md

Review focus:

- Build status.
- Screenshot evidence.
- Route coverage.
- Asset QA.
- Static deployment suitability.
- Known deployment blockers.

5. Review Asset And IP Scope

Read:

- FOLIOFRAME_ASSET_IP_MANIFEST.md

Review focus:

- Approved brand assets.
- Approved logo, visual and motif folders.
- Repository work product.

- Third-party dependencies.
- Trademark, domain and assignment diligence.

6. Review Commercial Framing

Read:

- FOLIOFRAME_ACQUISITION_MEMO.md
- FOLIOFRAME_VALUATION_RATIONALE.md
- FOLIOFRAME_BUYER_FAQ.md

Review focus:

- Acquisition thesis.
- Value drivers.
- Valuation constraints.
- Service launch path.
- Live SaaS buildout path.

7. Use Outreach Copy Only After Diligence Alignment

Read:

- FOLIOFRAME_OUTREACH_EMAIL.md

Review focus:

- Whether the buyer-facing description matches the actual static/demo status.
- Whether the recipient understands this is not yet live automated software.

Final Buyer Decision Questions

Before proceeding, answer:

- Is the buyer acquiring a service-brand asset, a future SaaS foundation, or both?
- Are approved brand assets and transfer rights clear?
- Are legal/privacy obligations understood?
- Is a production implementation budget available if live SaaS functionality is desired?
- Is the buyer comfortable deploying first as a static service website?

FolioFrame Red-Flag Disclosure Summary

Purpose

This document summarizes the key buyer disclosures that should remain visible during diligence and sale-room review.

Static/Demo Status

FolioFrame is currently buyer-ready as a static service website and static portal/demo surface.

It is not currently a live SaaS, live fulfilment platform, payment processor, production support desk, live monitoring tool or customer database.

No Production Auth

The repository includes Clerk-related foundation work and development planning, but production auth is not active for a buyer-ready SaaS launch.

Before live software launch, a buyer must configure production auth, roles, workspace access, user lifecycle handling and security review.

No Live Billing

FolioFrame does not currently process payments.

There is no live Stripe checkout, no live billing portal, no payment collection, no subscription lifecycle, and no production webhook handling active in the current static/demo build.

No Live Fulfilment Automation

FolioFrame does not currently automate live customer fulfilment.

There are no active production workflows for live checkout events, email delivery, entitlement changes, file access, video access, support routing or buyer fulfilment.

No Real Customer Data

The portal and demo data are static or fictional.

No real buyer records, customer support tickets, production payment events or client fulfilment records should be represented as active inside the current build.

Legal And Privacy Review Required

Before public commercial operation, a buyer should complete legal and privacy review covering:

- Website terms.
- Privacy policy.
- Refund policy.
- Data processing obligations.
- Customer support handling.
- Access and deletion processes.
- Any jurisdiction-specific requirements.

IP, Domain And Trademark Diligence Required

Before acquisition close or public launch, buyer should verify:

- FolioFrame name ownership and trademark availability.
- Domain ownership and transfer status.
- Approved asset usage rights.
- Contributor assignment or work-for-hire status.
- Third-party package license obligations.
- Whether any final brand assets require separate transfer documentation.

Safe Buyer Statement

FolioFrame can be presented as a polished static service-brand website, static portal/demo surface, implementation methodology and future service-led SaaS foundation.

It should not be presented as an operating live SaaS or automated fulfilment product until the production implementation phase is complete.

FolioFrame Buyer One-Pager

Snapshot

FolioFrame is a buyer-access reliability system for digital product sellers.

It is currently packaged as a buyer-ready static service website and static portal/demo surface. It presents a premium implementation service for mapping, testing and documenting checkout-to-customer delivery systems across payment, entitlement, access, delivery, onboarding, support, follow-up, migration, launch readiness, reporting and verified delivery proof.

What A Buyer Gets

- A polished Next.js App Router public website.
- A static internal /app portal/demo showing the command-centre concept.
- Structured offer, module and demo data models.
- Approved FolioFrame brand assets already wired into the app.
- Implementation documentation, SOPs, runbooks and deployment notes.
- QA evidence, responsive screenshots and deployment-readiness proof.
- Live-product foundations for future Clerk, Prisma and Postgres work, while still preserving static fallback behavior.

Current Commercial Position

FolioFrame can be reviewed or deployed as a static service-brand site immediately. The most developed offer is Signature Launch Premium, positioned around premium checkout-to-customer delivery reliability work for digital product sellers.

Core pricing examples in the static content include:

- FolioFix Audit: £497-£997
- FolioFrame Pro System: £1,997-£2,997
- Signature Launch System: £7,500
- Signature Launch Premium: £9,997
- Signature Launch + LaunchRoom: £11,500-£14,500
- MigrationFrame add-on: £1,500-£5,000
- AgencyFrame: £12,500-£25,000+
- AccessGuard + ProofMetrics retainer: £1,497/month

Current Deployment State

The current build is ready as a static buyer-facing service website and static portal/demo surface. It is not a live SaaS and should not be sold as one without further backend, auth, database, integration and legal work.

Key Routes

- /
- /signature-launch
- /pricing
- /modules
- /apply
- /app

What Is Not Included Yet

- Production auth
- Production billing
- Live checkout
- Webhook ingestion
- Live email sending
- Live support ticketing
- Customer data storage
- Monitoring operations
- Legal/privacy sign-off

Recommended Buyer Next Step

Review the static website, portal demo, QA reports and deployment notes first. Then decide whether to launch FolioFrame as a premium service brand, continue the live SaaS buildout, or use the assets and architecture as an acquisition-ready foundation.

FolioFrame Acquisition Memo

Executive Summary

FolioFrame is a premium buyer-access reliability system for digital product sellers. It focuses on the operational gap between checkout and customer success: payment confirmation, entitlement/access lifecycle, delivery, onboarding, support recovery, follow-up, migration, launch readiness, reporting and verified delivery proof.

The current asset is a static service website and static portal/demo built with Next.js App Router, TypeScript and Tailwind CSS. It is accompanied by structured content, implementation documentation, QA evidence, approved brand assets and deployment-readiness notes.

Acquisition Thesis

FolioFrame is attractive as a service-led product foundation because it translates a painful operational problem into a clear premium offer:

- Digital product sellers often use disconnected checkout, course, email, file, video and support tools.
- Buyer access failures can create support load, refund pressure and launch-week risk.
- Sellers need mapped, tested and documented operating systems before adding automation.
- Agencies and consultants can package FolioFrame as a repeatable implementation method.

Current State

Ready:

- Static public service website
- Static /app portal/demo surface
- Module architecture and content library
- Offer and pricing structure
- Approved brand assets wired into app surfaces
- Implementation docs, runbooks and SOPs
- QA reports and responsive screenshots
- Deployment metadata, sitemap, robots and manifest

Not ready:

- Live SaaS operation
- Production authentication
- Production database use
- Live checkout/webhooks

- Live email sending
- Customer data handling
- Support ticketing
- Legal/privacy sign-off

Technology Summary

- Next.js App Router
- TypeScript
- Tailwind CSS
- Prisma and Postgres foundation
- Clerk auth foundation
- Static fallback behavior for demo use
- Approved assets under `public/assets/`
- Deployment expected on Vercel or another Next.js-compatible host

Commercial Surface

The strongest buyer-facing offer is Signature Launch Premium, supported by modules such as FolioFix, DeliveryProof, AccessGuard, AccessDesk, RevenueFrame, AccessSafe, EntitlementFrame, InboxGuard, AccessHub, ProofMetrics and the FolioFrame Verified Delivery Standard.

The current copy presents FolioFrame as an implementation service, not a live automated SaaS.

Strategic Optionality

A buyer could:

- Deploy the static website as a service brand.
- Sell the premium implementation package manually.
- Use the internal portal demo in sales calls.
- Turn the portal into a live client workspace product.
- Extend the implementation docs into client delivery operations.
- Package AgencyFrame for agencies and consultants.

Diligence Notes

Before acquisition close or public launch, buyer should verify:

- Source asset ownership and transfer permissions.
- Trademark/domain availability and ownership.

- Legal/privacy review.
- Any third-party package license obligations.
- Deployment environment setup.
- Whether live SaaS buildout is desired.
- Any financial, traffic or customer claims, if later introduced.

Acquisition Recommendation

FolioFrame is most defensible as a polished service-brand and implementation-method asset today, with credible expansion potential into a service-led SaaS. It should be represented honestly as static/demo-ready rather than live-product complete.

FolioFrame Demo Walkthrough Script

Purpose

Use this script to walk a buyer through FolioFrame as a static service website and static portal/demo surface.

Do not present the demo as live software with active billing, production auth, customer records, monitoring or integrations.

Suggested Setup

Open the following routes:

- /
- /signature-launch
- /pricing
- /app
- /app/implementation-docs

Opening Talk Track

FolioFrame is a buyer-access reliability system for digital product sellers. The core problem is that checkout, access, delivery, onboarding and support often live across disconnected tools. FolioFrame packages the work of mapping, testing and documenting that checkout-to-customer route.

This build is buyer-ready as a static service website and static portal demo. It is not being represented as a live SaaS yet.

Route 1: Homepage

Point out:

- The positioning: checkout-to-customer systems that are mapped, tested and documented.
- The outcome strip from payment to reporting.
- The premium brand and approved visual assets.
- The safe scope boundary that avoids impossible promises.

Suggested line:

FolioFrame is not promising platform outcomes. It is selling clarity, operational review, delivery safeguards and owner-approved documentation.

Route 2: Signature Launch

Point out:

- Signature Launch Premium as the high-ticket implementation offer.
- Included modules: FolioFix, DeliveryProof, AccessGuard, AccessDesk, RevenueFrame, AccessSafe, EntitlementFrame, InboxGuard, AccessHub, ProofMetrics and the FolioFrame Verified Delivery Standard.
- The distinction between launch readiness and live monitoring.

Suggested line:

This is the offer page a buyer could deploy first if they want to sell FolioFrame as a premium service before building full SaaS operations.

Route 3: Pricing

Point out:

- Premium offer hierarchy.
- Lower-ticket audit entry point.
- Retainer path through AccessGuard + ProofMetrics.
- Static pricing boundary: no payment processing is active.

Suggested line:

The pricing architecture supports both implementation revenue and ongoing review work, but checkout collection is intentionally not wired in this static demo.

Route 4: /app Portal Demo

Point out:

- Static/demo notices.
- Command-centre overview.
- Workspace review materials.
- Module status and owner action queue.
- Approved asset usage.

Suggested line:

This is a portal concept and sales demo. It shows how a buyer might review module status, owner actions and handover materials, but it does not display real customer data.

Route 5: Implementation Docs Hub

Point out:

- Production integration blueprint.
- Webhook event map.
- Client onboarding SOP.
- DeliveryProof test plan.
- LaunchRoom and MigrationFrame runbooks.
- AgencyFrame playbook.

Suggested line:

The implementation docs turn the brand from a website into a service delivery method.

Disclosure Moment

State clearly:

FolioFrame is ready as a static service website and static demo. It is not ready as a live SaaS until production auth, secure credentials, database configuration, integrations, backend workflows and legal/privacy review are completed.

Closing Buyer Prompt

The buyer decision is whether to:

- Deploy as a static service brand.
- Start selling the premium implementation manually.
- Build the live SaaS layer.
- Combine service revenue with progressive productization.

FolioFrame Product Summary

Product Definition

FolioFrame is a premium buyer-access reliability system for digital product sellers.

It builds, tests and documents checkout-to-customer systems covering:

- Payment path
- Entitlement/access lifecycle
- Delivery
- Onboarding
- Support and access recovery
- Follow-up
- Migration
- Launch monitoring recommendations
- Operational reporting
- Verified delivery proof

Current Product Form

Current state:

- Static service website
- Static /app portal/demo
- Structured content model
- Implementation and SOP documentation
- Deployment-ready Next.js build
- Live-product architecture foundations

Not current state:

- Live SaaS
- Automated checkout fulfilment
- Production billing
- Live support desk
- Live customer database
- Production monitoring system

Public Website

The public website includes:

- Homepage
- Signature Launch
- Pricing
- Module library
- Module detail pages
- Apply page preview
- FAQ
- Starter legal/support pages

Static Portal

The /app portal includes:

- Command centre overview
- Premium dashboard
- Buyer journey
- Product matrix
- Module workspaces
- Handover workspace
- Implementation docs hub
- Live foundation status page
- Workspace setup foundation

Modules

Core:

- FolioFix
- DeliveryProof
- AccessGuard
- AccessDesk
- RevenueFrame
- AccessSafe
- Product Tracks

Advanced:

- EntitlementFrame
- InboxGuard
- AccessHub
- LaunchRoom
- MigrationFrame
- ProofMetrics
- AgencyFrame
- FolioFrame Verified Delivery Standard

Offers

- FolioFix Audit
- FolioFrame Pro System
- Signature Launch System
- Signature Launch Premium
- Signature Launch + LaunchRoom
- MigrationFrame add-on
- AgencyFrame
- AccessGuard + ProofMetrics retainer

Technology

- Next.js App Router
- TypeScript
- Tailwind CSS
- Prisma foundation
- Clerk auth foundation
- Postgres local development path
- Static fallback data
- Approved FolioFrame asset system

Positioning Guardrail

FolioFrame should be described as a buyer-access reliability and checkout-to-customer delivery system, not as a portfolio/showcase tool or generic automation product.

FolioFrame Asset And IP Manifest

Purpose

This manifest describes the repository assets and intellectual property surfaces a buyer should review.

It is not a legal transfer document. Buyer should complete formal legal and IP diligence before acquisition or commercial launch.

Brand Name

Active product name:

- FolioFrame

Do not use prior or rejected names as active product copy.

Approved Asset Folders

Approved assets are stored under:

- public/assets/logos/
- public/assets/visuals_01_to_10/
- public/assets/curated_motifs/

Approved Logo Files

- public/assets/logos/APPROVED_primary_logo_transparent.png
- public/assets/logos/APPROVED_primary_logo_mono_ivory.png
- public/assets/logos/APPROVED_standalone_emblem_transparent.png

Approved Visual Files

- visual_01_Source_Truth_System.png
- visual_02_Dashboard_Command_Centre.png
- visual_03_Checkout_to_Access_Flow.png
- visual_04_EntitlementFrame_Access_Control.png
- visual_05_DeliveryProof_Workspace.png
- visual_06_RevenueFrame_Recovery_Workspace.png
- visual_07_Workspace_Setup_Onboarding.png

- `visual_08_Implementation_Handover_Room.png`
- `visual_09_Strategic_Buyer_Summary.png`
- `visual_10_Sale_Room_Cover.png`

Curated Motifs

Curated motif sets are stored under:

- `public/assets/curated_motifs/archive_support_only_10/`
- `public/assets/curated_motifs/investor_buyer_deck_top_10/`
- `public/assets/curated_motifs/primary_master_top_10/`
- `public/assets/curated_motifs/product_ui_support_top_10/`
- `public/assets/curated_motifs/reports_proposals_top_10/`
- `public/assets/curated_motifs/subtle_patterns_top_10/`
- `public/assets/curated_motifs/website_backgrounds_top_10/`

Asset Registry

Runtime asset references are centralized in:

- `content/folioframeBrandAssets.ts`

Repository-Owned Work Product

The repository contains:

- Next.js application source
- Tailwind styling
- TypeScript components
- Structured FolioFrame module/offer/demo content
- Implementation docs and SOPs
- Deployment notes
- QA reports and screenshots
- Sale-room documentation

Third-Party Dependencies

Key third-party packages include:

- Next.js
- React

- TypeScript
- Tailwind CSS
- Prisma
- Clerk
- pg
- ESLint

Buyer should review package licenses before acquisition close or production deployment.

IP Diligence Gaps

Buyer should verify:

- Final source package/license terms for approved assets.
- Trademark availability and ownership for FolioFrame.
- Domain ownership and transfer status.
- Any contributor assignment requirements.
- Third-party package license compliance.
- Whether any design, copy or documentation requires formal assignment.

Asset Rules

Do not replace, redraw, regenerate, crop, trace, imitate or substitute the approved FolioFrame logo, visuals or motifs.

Do not import rejected generated assets.

FolioFrame QA Evidence Summary

Summary

FolioFrame has completed locked brand integration, final buyer-ready QA, screenshot encoding correction and static buyer-demo deployment readiness.

Key QA Documents

- docs/qa/FOLIOFRAME_FINAL_BUYER_READY_LAUNCH_QA_2026_07_02.md
- docs/qa/screenshots/final-buyer-ready-launch-qa-2026-07-02/
- docs/deployment/FOLIOFRAME_STATIC_BUYER_DEMO_DEPLOYMENT_NOTES.md

Buyer-Ready QA Coverage

Routes reviewed:

- /
- /signature-launch
- /pricing
- /app
- /signature-launch-system

QA findings:

- Internal links passed.
- Approved asset references passed.
- Rejected generated asset filename grep returned no matches.
- Locked colour tokens remain present.
- Static/demo honesty remains visible.
- /app mobile shows dashboard content after compact navigation/status area.
- Screenshot artifacts were corrected so .png files contain PNG image data.

Build Evidence

Deployment readiness pass ran:

- npm run prisma:generate
- npm run lint
- npm run typecheck

- `npm run build`

Build result:

- Passed.
- 63 pages generated after adding sitemap, robots and manifest routes.

Deployment Route Checks

Local built server returned 200 OK for:

- `/`
- `/signature-launch`
- `/pricing`
- `/app`
- `/robots.txt`
- `/sitemap.xml`
- `/manifest.webmanifest`

Asset QA Evidence

Approved assets remain under:

- `public/assets/logos/`
- `public/assets/visuals_01_to_10/`
- `public/assets/curated_motifs/`

No `public/assets` files were changed during deployment prep.

Static Boundary Evidence

The app and docs state:

- No live billing.
- No live checkout.
- No live customer data.
- No live monitoring.
- No production webhooks.
- No active support ticketing.
- `/app` remains static/demo unless live auth/database are intentionally configured later.

Remaining QA Gaps

- Production deployment should be verified on the final hosting domain.
- Legal/privacy pages require formal legal review before public launch.
- Security review is needed before enabling live auth, database, checkout, email or customer records.
- Buyer should run fresh screenshot QA after deployment domain is configured.

FolioFrame Deployment-Readiness Summary

Current Recommendation

FolioFrame is ready to deploy as a buyer-ready static service website and static portal/demo surface.

It should not be deployed or sold as a live automated SaaS until live-product blockers are resolved.

Platform

Recommended platform:

- Vercel

Compatible with:

- Any hosting environment that supports Next.js 15 App Router builds.

Commands

Pre-deployment commands:

```
```bash
npm run prisma:generate
npm run lint
npm run typecheck
npm run build
```
```

Expected build command:

```
```bash
npm run build
```
```

Route Output

Deployment readiness build generated 63 pages, including:

- /
- /signature-launch

- /pricing
- /app
- /robots.txt
- /sitemap.xml
- /manifest.webmanifest

Metadata And Discovery

Included:

- Root title and description
- Open Graph metadata
- Twitter/social preview metadata
- Manifest route
- Sitemap route
- Robots route
- Noindex metadata for /app

Environment Variables

For static demo deployment, only this value is recommended:

```
```bash
NEXT_PUBLIC_APP_URL="https://your-approved-domain.example"
```
```

Do not configure live-product secrets unless intentionally starting the live phase:

- DATABASE_URL
- NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY
- CLERK_SECRET_KEY
- AUTH_SECRET
- STRIPE_SECRET_KEY
- STRIPE_WEBHOOK_SECRET
- RESEND_API_KEY
- SENTRY_DSN

Deployment Boundaries

The deployment is a static buyer demo. It does not include:

- Live checkout
- Live billing
- Live support ticketing
- Live monitoring
- Real customer records
- Production webhooks
- Production credential handling

Buyer Deployment Checklist

- Choose production domain.
- Set `NEXT_PUBLIC_APP_URL`.
- Deploy with `npm run build`.
- Confirm `/`, `/signature-launch`, `/pricing` and `/app`.
- Confirm `/robots.txt`, `/sitemap.xml` and `/manifest.webmanifest`.
- Verify approved assets load on the deployed domain.
- Confirm static/demo notices are visible.
- Complete legal/privacy review before public promotion.

FolioFrame Static/Demo Boundary Disclosure

Disclosure

FolioFrame is currently a buyer-ready static service website and static portal/demo surface.

It is not a live SaaS, production fulfilment platform, payment processor, support desk, monitoring system or customer database.

What Works Today

- Public website pages render.
- Static pricing and offer content renders.
- Static module pages render.
- Static /app portal/demo pages render.
- Approved FolioFrame assets render.
- Structured content and demo data are present.
- Deployment metadata, sitemap, robots and manifest are present.
- Prisma, Clerk and Postgres foundations exist for future live work.

What Is Not Live

- No live auth is required for the static demo.
- No live billing is active.
- No live checkout is connected.
- No production webhooks are active.
- No live email sending is active.
- No live customer records are stored or displayed.
- No live support tickets are handled.
- No live monitoring is active.
- No backend public application form handling is active.

Demo Data

Any internal portal records are fictional/static demo records. They should not be interpreted as customer records, support tickets, revenue data, platform events or operational monitoring.

Implementation Docs

Implementation docs are planning, SOP, runbook, QA and handover materials. They do not mean that third-party integrations are connected.

Buyer Guidance

A buyer can deploy FolioFrame as a static service-brand demo and use it in sales conversations. To operate FolioFrame as a live SaaS or automated fulfilment product, the buyer must complete a separate implementation phase covering:

- Production auth
- Secure credential management
- Database deployment
- Workspace authorization
- Checkout/webhook integrations
- Email provider integration
- Support workflow design
- Monitoring decisions
- Legal and privacy review

Safe Statement

FolioFrame is ready to review, present and deploy as a static service website and static portal/demo. It is not ready to operate as live automated fulfilment software.

FolioFrame Buyer FAQ

Is FolioFrame a live SaaS today?

No. It is currently a buyer-ready static service website and static portal/demo surface. Live SaaS operation would require additional production auth, database, backend workflows, secure credentials and integrations.

Can it be deployed now?

Yes, as a static buyer-facing service website and demo portal. It should not be marketed as live automated fulfilment software.

What problem does FolioFrame solve?

It helps digital product sellers map, test and document the checkout-to-customer journey: payment, entitlement, access, delivery, onboarding, support, follow-up, migration, reporting and verified delivery proof.

What is the strongest offer?

Signature Launch Premium is the strongest current offer. It packages the core and advanced modules into a premium implementation scope for complex digital product sellers.

Does FolioFrame process payments?

No. Pricing is static service-offer copy. No payment processing is active.

Does the portal show real customer data?

No. The /app portal uses static/demo records and clear boundary notices.

Are Stripe, Resend, Clerk or Postgres connected in production?

No production integration is active. Clerk, Prisma and Postgres foundations exist for future live-product work, but the static buyer demo does not require production credentials.

Are approved brand assets already integrated?

Yes. Approved FolioFrame logo, visual and motif assets are stored under `public/assets/` and referenced through the app.

Are rejected generated assets used?

No. QA scans found no rejected generated asset filenames.

What would a buyer need to do after acquisition?

Likely next steps:

- Confirm IP and asset transfer rights.
- Choose domain and deployment environment.
- Complete legal/privacy review.
- Deploy the static site.
- Decide whether to sell service-led offers manually first.
- Scope live SaaS implementation if desired.

What are the main diligence gaps?

- Legal/privacy review
- IP and trademark confirmation
- Domain/asset transfer details
- Third-party dependency license review
- Production security review
- Live SaaS implementation scope
- Any customer, revenue or traffic proof if later claimed

Can an agency use FolioFrame?

Yes, the AgencyFrame module and service docs support an agency delivery model. Each agency/client implementation would still need approved scope and operational review.

FolioFrame Valuation Rationale

Important Note

This document is a qualitative valuation rationale, not a formal appraisal, investment recommendation or financial advice.

FolioFrame currently has strongest value as a branded service/productization asset and static demo foundation, not as an operating SaaS with recurring revenue already proven.

Value Drivers

1. Clear Market Pain

Digital product sellers often operate with disconnected checkout, access, content delivery, email, file, support and reporting tools. FolioFrame is positioned around the operational risk created by those gaps.

2. Premium Service Offer Structure

The current offer ladder supports multiple commercial entry points:

- Audit
- Pro system
- Premium launch implementation
- LaunchRoom add-on
- MigrationFrame add-on
- AgencyFrame
- Retainer

3. Repeatable Methodology

The implementation docs, SOPs, runbooks and handover templates create a repeatable delivery system rather than a generic website.

4. Brand And Buyer Presentation

The approved asset system, buyer-ready public pages, deployment metadata and QA evidence make FolioFrame easier to present to a buyer than an unfinished concept.

5. Productization Path

The repository includes Prisma, Clerk and workspace foundations that can support a later service-led SaaS buildout.

6. Deployment Readiness

The static buyer demo can be deployed without production secrets. This lowers friction for review, marketing validation or buyer demos.

Valuation Constraints

Constraints that reduce valuation versus a live SaaS:

- No proven revenue in the repo.
- No production customers.
- No live checkout.
- No production auth.
- No production database.
- No active integrations.
- No usage analytics or retention metrics.
- Legal/privacy review still required.

Buyer Valuation Angles

A buyer may value FolioFrame as:

- A premium service brand ready for manual launch.
- A productized consulting methodology.
- A static sales/demo asset.
- A foundation for a live service-led SaaS.
- A module and content library for buyer-access reliability work.

Suggested Valuation Framing

Frame the asset around:

- Build replacement cost.
- Brand and design readiness.
- Offer architecture.
- Documentation depth.
- Speed to deploy.
- Future SaaS optionality.

Do not frame it as a revenue-generating SaaS unless buyer diligence confirms actual revenue, customers and production operations.

Buyer Diligence Needed Before Final Price

- Verify asset/IP ownership.
- Review code and package licenses.
- Review domain/trademark position.
- Confirm any revenue/customer evidence.
- Estimate live SaaS buildout cost.
- Confirm legal/privacy requirements.
- Assess buyer's ability to sell the service offer.

FolioFrame Outreach Email

Short Version

Subject: FolioFrame - buyer-access reliability system for digital product sellers

Hi [Name],

I'm sharing FolioFrame, a buyer-ready static service website and portal/demo for a premium checkout-to-customer reliability system.

FolioFrame helps digital product sellers map, test and document the operational path from payment through access, delivery, onboarding, support, follow-up, reporting and verified delivery proof.

The current asset includes:

- A polished Next.js public website
- A static /app portal/demo
- Approved brand assets wired into the build
- Signature Launch Premium offer structure
- Implementation SOPs, runbooks and handover docs
- QA evidence, responsive screenshots and deployment notes
- Prisma/Clerk foundations for a future live SaaS phase

Important boundary: this is not being represented as a live SaaS yet. There is no live billing, customer data, production auth, monitoring or fulfilment automation connected.

The asset is ready to review and deploy as a static buyer-facing service/demo, with a clear path to productize later.

Would you be open to reviewing the sale-room pack?

Best,

Longer Version

Subject: FolioFrame sale-room pack - static buyer demo + service-led SaaS foundation

Hi [Name],

I wanted to share FolioFrame, a premium buyer-access reliability system for digital product sellers.

The core problem FolioFrame addresses is the messy operational path between checkout and customer access: payment, entitlement, delivery, onboarding, support recovery, follow-up, migration, reporting and delivery proof often live across separate tools.

FolioFrame packages that work into a premium implementation service with a static portal/demo and a later SaaS path.

Current state:

- Buyer-ready static service website
- Static internal /app portal/demo
- Approved brand assets integrated
- Signature Launch Premium offer architecture
- Full module library
- Implementation documentation, SOPs and runbooks
- QA evidence and deployment-readiness notes
- Prisma, Clerk and workspace foundations for future live buildout

Boundary:

FolioFrame is not yet a live SaaS. It does not currently include live billing, production auth, customer data, live monitoring, webhooks or automated fulfilment. The current asset is strongest as a deployable service brand and demo foundation, with a clear path into service-led SaaS development.

If this is in your area, I can share the sale-room index and demo walkthrough.

Best,

[Your Name]

FolioFrame Buyer Sale-Room Pack Manifest

Package Name

FolioFrame_Buyer_Sale_Room_Pack_v1.zip

Purpose

This manifest lists the buyer-facing documents intended for inclusion in the FolioFrame buyer sale-room export pack.

The package is for external review of FolioFrame as a buyer-ready static service website and static portal/demo surface.

Included Markdown Files

- docs/sale-room/EXPORT_README.md
- docs/sale-room/FOLIOFRAME_SALE_ROOM_INDEX.md
- docs/sale-room/FOLIOFRAME_BUYER_REVIEW_ORDER.md
- docs/sale-room/FOLIOFRAME_RED_FLAG_DISCLOSURE_SUMMARY.md
- docs/sale-room/FOLIOFRAME_BUYER_ONE_PAGER.md
- docs/sale-room/FOLIOFRAME_ACQUISITION_MEMO.md
- docs/sale-room/FOLIOFRAME_DEMO_WALKTHROUGH_SCRIPT.md
- docs/sale-room/FOLIOFRAME_PRODUCT_SUMMARY.md
- docs/sale-room/FOLIOFRAME_ASSET_IP_MANIFEST.md
- docs/sale-room/FOLIOFRAME_QA_EVIDENCE_SUMMARY.md
- docs/sale-room/FOLIOFRAME_DEPLOYMENT_READINESS_SUMMARY.md
- docs/sale-room/FOLIOFRAME_STATIC_DEMO_BOUNDARY_DISCLOSURE.md
- docs/sale-room/FOLIOFRAME_BUYER_FAQ.md
- docs/sale-room/FOLIOFRAME_VALUATION_RATIONALE.md
- docs/sale-room/FOLIOFRAME_OUTREACH_EMAIL.md
- docs/sale-room/FOLIOFRAME_BUYER_SALE_ROOM_PACK_MANIFEST.md

Included Export Files

- docs/sale-room/FolioFrame_Buyer_Sale_Room_Pack_v1.pdf

Excluded From This Pack

The export pack intentionally excludes:

- Source application code.
- `node_modules/`.
- `.next/`.
- `.git/`.
- `.env` and `.env.local`.
- Production credentials.
- Database volumes.
- Rejected generated assets.

Static/Demo Disclosure

FolioFrame is packaged here as a static service website, static portal/demo surface, implementation methodology and future service-led SaaS foundation.

It should not be represented as an operating live SaaS, live billing system, customer database, production support desk, live monitoring surface or automated fulfilment platform.

Buyer Diligence Notes

Before acquisition close or production use, buyer should complete:

- IP and approved asset rights review.
- Trademark and domain diligence.
- Third-party dependency license review.
- Legal/privacy review.
- Production auth, backend, integration and security review if live SaaS operation is desired.
